

## Your Telehealth Platform for the National DPP

The Wellocity Telehealth platform is used by CDC-recognized organizations to increase access to the National Diabetes Prevention Program (National DPP), enable participants to conveniently connect from their homes, and make the best use of a limited supply of lifestyle coaches.

## Ready to Get Started?

If you are ready to get started with Wellocity or would like additional information, please send an email to:

NDPP@wellocitywellness.com including details about your organization and needs or visit:

<https://wellocitywellness.com> to request a demo.

## Data Reporting for the National DPP

To maintain CDC recognition, lifestyle change programs must submit evaluation data every 6 months. These data include factors such as participant demographics, attendance, weight loss progress, and physical activity. CDC will provide you with a report after every data submission that outlines your progress toward full recognition.

## How does Wellocity Help?

The Wellocity platform for the National DPP enables your program staff to create 1-click reports in the CDC-required format. Our platform eliminates the tedious and error-prone processes required to generate a report so that your valuable time and resources can be spent on more important things - coaching! The platform handles all the data reporting rules of the DPRP standard so your program staff can easily generate accurate reports and submit them to the CDC.

## Benefits to your Organization

- No need to learn or use additional tools for data reporting
- Schedule all regular and makeup sessions per the DPRP standard
- Automate attendance
- Accurately report weight and physical activity minutes
- Preview and create 1-click reports in CSV format and submit to the CDC

## How it Works

The Wellocity platform has all the data required for reporting in one place including demographic and prediabetes determination data and per-session attendance, weight loss, and physical activity. This allows your program staff accurate reports from within the lifestyle coach portal.

Session Data	Demographic Data	Prediabetes Determination
ID, Schedule, Type	Demographic Information	GLUCTEST
Delivery Mode	Enrollment Source	GDM
Module Name	Payer Type	RISKTEST
Weight		
Physical Activity
